

"Are the month's entries all in Business Central? When can I see the financials?"

If you run finance, you ask these every month. Then you wait while somebody builds the answer. **Lens sits on your Business Central ledger and answers them the moment you ask**, live, governed by role, with nothing rebuilt by hand.

"How are my gross margins against last month? Against the same month last year?"

Any period against any period, margins by brand, location or outlet, **on one screen**. Every tab follows the same filters.

"Which unit is performing best? Which are the worst?"

Every outlet ranked by any measure, computed on the spot, including the unallocated bucket, so **nothing is quietly dropped**.

"Why are payroll costs up? Which branch? Is it a one-off? What's the 12-month trend?"

Four questions, one chain. **Investigate follows it**: cost line to branch to month, with the ledger rows behind every figure.

"How are my cash flows? What's my cash conversion cycle?"

Cash flow and liquidity read **live from the ledger**: current the moment anyone opens them, not as of the last export.

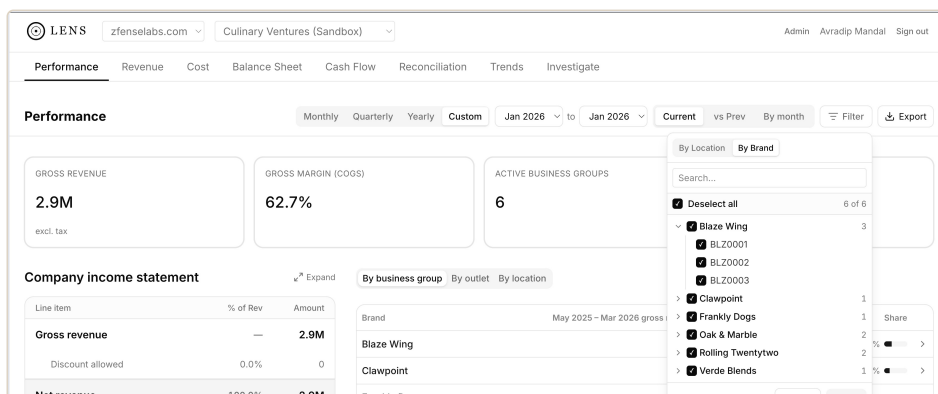

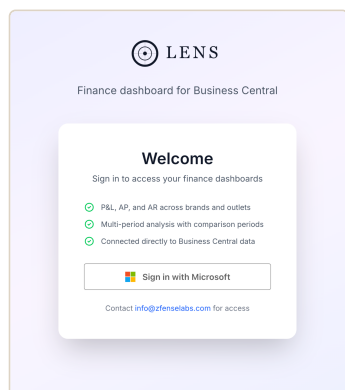

"How is YTD against last year, same period?"

"Which purchase items have gone up?"

"What did the price increase actually do?"

"How are the liquidity ratios?"

Keep asking. It answers.

Sign in with Microsoft, then pick the period and slice the whole business by brand, location or outlet. Every tab follows the same filters.

1

Connect

Sign in with Microsoft. Lens reads Business Central live. Read-only, it never writes back.

2

See

Statements, margins, cash flow and rankings on every desk, each person seeing what their role allows.

3

Ask

Type the question as you would say it. Investigate answers from the ledger; Claude or ChatGPT can connect to the same governed data.

RUNNING IN PRODUCTION TODAY 8 business groups, around 125 outlets, one finance team. **Close took two weeks. It now takes two days**, and the day the entries post, every statement is already current.

See your own questions answered. Book a 30-minute guided demo.
